## **ABSTRACT**

Giftedness is a phenomenon that has from time to time occupied the research community in terms of its definition, its characteristics and the factors that contribute to its manifestation. Research has shown that charisma not only corresponds to a high mental ability but also includes other concepts such as that of consciousness. In the pyramid of charisma, in fact, consciousness is at the top of the hierarchy. The present study was based on articles in scientific journals, in order to investigate some of the factors that enhance the manifestation of giftedness. The results showed that Information and Communication Technologies (ICT), environmental factors (family, school) and other complementary factors play an important role in the concept of giftedness.
